

We're glad you've chosen LionGP Stickers.

LionGP Seat Wrap: Please consider the following points:

1. **Cleaning:** Ensure the surface is thoroughly cleaned to remove dust, dirt, and grease. It's best to use an alcohol-based cleaner.
2. **Tools:** Prepare all necessary tools such as squeegee, cutter, heat gun/hairdryer, masking tape, measuring tape, etc.
3. **Room Temperature:** Work in a room with a constant temperature. Extreme temperatures can affect the wrap.
4. **Placement:** Cut the backing film to position individual elements correctly. Place them in the center and lightly secure with masking tape. Feel free to use the measuring tape for accuracy.
5. **Application:** Remove the backing film on the left or right side and slowly smooth towards the edge. Repeat the process on the other side. Avoid wrinkles and bubbles by evenly smoothing the wrap, preferably with a squeegee or similar tool.

Positioning the sides, using the holes as a guide to achieve perfect alignment for your sticker.

Next, use the top seatbelt holes once again to assist in placing the top part.

Exercise caution when handling the largest piece, ensuring it is properly aligned before completing the application.

These wrapping kits utilize air release vinyl to help prevent bubbles during the application process. You may gently warm the vinyl to reduce creases to some degree.

Apply the sticker to a surface that is both dry and clean. Remove the backing paper and smoothly adhere it to your chosen surface.

It's important to note that these stickers are not intended for removal and reapplication after initial application.

6. **Edge Sealing:** Ensure edges are well sealed to prevent the wrap from peeling off.
 7. **Heat Gun:** Use a heat gun to stretch and adjust the wrap as needed, especially on curves or edges where the wrap is pre-cut. Be sure to apply gentle heat.
 8. **Patience:** Work carefully and take your time to achieve a clean result.
 9. **Check:** After application, check the adhesion of the wrap to ensure it's properly fixed, especially at the edges.
 10. **Care Instructions:** To achieve a long lifespan, clean LionGP wraps with glass cleaner or water and a soft cloth.
 11. **Quality of the Wrap:** LionGP uses only premium quality air release vinyl to achieve a perfect finish for your sim seat.
- Follow these steps to ensure that the LionGP Seat Wrap is applied correctly and yields an appealing result.
 - *It's also possible to moisten the wrap with a water/dish soap mixture for alignment. However, this is not mandatory as it is a premium wrap. If you do choose to work with the water/dish soap mixture, please note that the wrap will only be fully dry after 48 hours and may shift until then.*

Feedback, suggestions for improvement, and wishes for future versions are welcome via Instagram, Discord, or email.

We would be delighted if you would share a photo of your LionGP stickers on Instagram and tag @liongp.com_racing.
